

Indian Diagnostic Services Market Outlook 2020

Description: Diagnosis is the first step to disease management, as without accurate identification there is no possibility for accurate treatment. India is a land full of opportunities for players in the diagnostic service industry. The country has become one of the major destinations for various diagnostic services. Also, India's thriving economy is driving urbanization and developing an expanding middle class, with rising disposable incomes to spend on healthcare.

According to the new research report "Indian Diagnostic Services Market Outlook 2020", the diagnostic services market is expected to continue growing at 27.5% for next five years. This growth is likely to be driven by improving healthcare facilities, medical diagnostic and pathological laboratories, private-public projects, and the health insurance sector. Moreover, with the rise in health consciousness in the society and the rising burden of chronic diseases, this market will swell to approximately INR 860 Billion in revenues market by 2020.

Though a major portion of diagnostic business is being managed by the so called unorganized sector, the diagnostic service market is expected to become much more organized and consolidated with a lot of small and independent laboratory players becoming franchisees for the larger players. In order for clients and interested companies to enter this industry, our report provides an in-depth analysis of the cost assessment comparison of most common pathological and radiological tests among Tier I and Tier II cities.

This present report provides an overview of the Indian diagnostic lab services market delivering an effective overview of the market size and future forecast. In terms of services, the market is dominated by pathology services, which account for approximately 70% of the market. The report additionally investigates the current market trends and opportunities with their impact on the performance of the sector. Further, the report provides consumer behavior patterns with respect to diagnostic services. Moreover, the report also provides insights regarding the prevalence and incidences of various diseases for which the diagnostic services are widely used.
